# Taking skin rejuvenation to another level

**Collagen P.I.N microneedling is an advanced aesthetic treatment to target fine lines, sun damage and acne scarring whilst boosting collagen levels.**

## Frequently Asked Questions

### What is Collagen P.I.N?

Collagen P.I.N is the most advanced form of microneedling that works by causing controlled injury to the skin layers and creating micro pathways that help channel appropriate growth factors & serums directly into the skin. This promotes collagen and elastin to produce healthier, plumper, younger looking skin.

### Who is suitable for this treatment?

Almost everyone can benefit from this advanced treatment but in particular it is especially outstanding in treating acne scars, wrinkles, stretch marks and sun damaged skin. Most areas of the body can be treated unless your practitioner determines otherwise.

### Does it hurt?

Prior to your treatment your practitioner will apply a cream to numb the area. This ensures the treatment is comfortable and pain free for you throughout the whole process.

### How quickly will I recover?

Immediately after treatment your skin will look a little flushed as if you had been in the sun. There may be some minimal swelling but this will resolve quickly. You may experience slight dryness and flaking for a few days however the Epionce Essential Recovery kit which your practitioner will recommend will minimise this.

### What results can I expect?

You can expect your skin to look plumper, healthier, brighter, more even and altogether younger looking within a few days with visible signs of regeneration and repair in 2 to 6 weeks. To further enhance anti-ageing outcomes we apply Growth Factors and Hyaluronic to increase epidermal thickness and dermal collagen levels.

### How many Collagen P.I.N. treatments will I need?

We recommend a course of three to six treatments which are usually spaced four to six weeks apart with maintenance treatments recommended at an appropriate interval.

### What are the aftercare instructions?

Epionce Priming Oil and Epionce Daily Shield SPF 50 is applied before you leave the clinic. We recommend using the Epionce Essential Recovery kit at home for one week post treatment.
