Botox at Woodford Medical

Dr Hilary Allan and Dr Mervyn Patterson are rated by the Telegraph and The Evening Standard as being amongst the top 10 injectors in the UK and as a result are much sought after for this procedure. More recently they were listed in Hello Magazine as Best in Business for Botox.

Their minimalistic approach to create the most natural look for you has gained them a loyal following. A freshened appearance that attracts comments about you looking really relaxed and well is what we aim to deliver.

Dedicated to ensuring the best possible results from your Botox procedure at Woodford Medical, the doctors have over 30 years combined experience and are leaders in the field of medical aesthetics.

Frequently Asked Questions

What is Botox?

Botox is a purified protein that acts as a neuromodulator and effects the message transfer from a nerve to a muscle. In the face this relaxes the area injected producing a smoother and wrinkle free appearance. There is only one 'Botox' product and whilst there are other similar alternatives their effectiveness and longevity are less predictable.

Is Botox safe?

At Woodford Medical your safety is of paramount importance. Botox is the only product licensed in the UK for use in the frown and laughter lines and also for underarm sweating and migraine. Botox is manufactured by the brand leader Allergan Ltd and should not be confused with other inferior and cheaper products sometimes used in the aesthetic industry.

What does it feel like?

The treatment involves a small number of tiny injections of the Botox solution into the muscle groups that are causing the lines and wrinkles. The procedure is virtually pain free, in the hands of our experienced Doctors, and no anaesthetic is required.

How long does it last?

The full effect of Botox takes between 4 and 14 days to develop and gives a smooth, wrinkle free appearance for approximately 3 - 4 months. We advise 3 - 4 treatments in the first year as the effects may then start to last longer and the time between repeat treatments increase.

What are the side effects?

There are very few side effects with Botox and these are usually technique dependent. Choice of your Practitioner is therefore of paramount importance. There have been no reported long term side effects from the use of Botox. There may be a small possibility of a bruise at the injection site.

www.woodfordmedical.com

With the help of our highly skilled experienced Doctors we can address a whole range of problems that can cause concern, helping you regain your confidence and improve your self-esteem.

What Botox can do for you

- Soften frown lines between the eyes giving a more relaxed look.
- Erase worry lines across the forehead providing a smoother appearance.
- Diminish laughter lines at the side of the eyes.
- Lift the corners of the mouth and soften lip lines.
- Sharpen and define the jaw line helping to reduce the jowl.
- Relax the jaw muscles helping prevent the side effects of teeth grinding (Bruxism) and reduce the enlarged jaw area.
- Reduce chronic headache and migraine.
- Eliminate embarrassing sweating in underarms, forehead, hands and other areas.
