Allow the beauty of your skin to resurface

Fractional 1540 Laser will enhance, stimulate and remodel your skin for a truly new you.

Frequently Asked Questions

How does it work?

Fractional skin resurfacing uses laser energy microbeams to target the natural water reserves in the skin. This heats the tissue and remodels collagen resulting in a healthier and more youthful skin, enhancing texture and tone.

Which areas can be treated with the 1540?

This fractional non-ablative (non-invasive) laser skin resurfacing treatment can be performed on the face and eye area, chest, arms and back of hands. Surgical scars and stretchmarks can be treated all over the body, including the face.

How many treatments will I need?

At Woodford Medical your Aesthetic Therapist will fully assess your skin before treatment commences but will usually recommend a course of treatments ranging between three and five sessions.

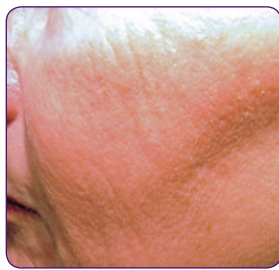

Who is suitable for this treatment?

This treatment is suitable for many skin types but in particular ageing skins and those clients who have stretchmarks or scarring concerns.

Frequently Asked Questions

What is Fractional 1540 Laser Skin Resurfacing?

Fractional 1540 Laser Skin Resurfacing is an advanced treatment for improving skin tone and texture by heating the tissue and thereby remodelling the collagen within the skin, resulting in a reduction of fine lines and wrinkles.

Fractional 1540 is a versatile procedure that also effectively treats scars and stretch marks. It is the first laser recognised in the US for its efficacy to treat stretchmarks and studies have shown an average improvement of between 50% and 75% in their appearance after a course.

Does it hurt and are there any side effects?

The sensation when you are having the treatment feels like a ping from an elastic band. You may experience some redness, warmth, swelling or tightness in the area post treatment but this will usually disappear within 24 hours.

Most clients notice positive changes in their skin tone and texture after a few weeks which can continue to improve months later. This is a non-invasive resurfacing treatment meaning that there is very little downtime.

The skin surface is not disrupted therefore side effects are very minimal. Post treatment your Aesthetic Therapist will advise the use of a 50+ sun protection factor such as Epionce Ultra Shield or Daily Shield.
