**Growth Factor**

We have introduced a new Growth Factor serum which can be used in conjunction with the DermaFrac system. This popular addition gives you the added benefits of cell hydration and increases collagen and elastin giving you firmer, smoother, brighter skin.

## Frequently Asked Questions

### What is DermaFrac?

DermaFrac is the latest advancement in Microneedling using 180 super fine needles to stimulate collagen production and cell renewal helping to plump, firm and smooth the skin.

### How does the DermaFrac work?

A crystal free microdermabrasion is performed to clear any dead skin cells, deep cleanse and prepare the face for the next stage. Then a precision controlled roller containing superfine needles rolls across the skin under vacuum creating micro channels in the skin. The DermaFrac system simultaneously enables the even delivery and maximised infusion of a potent Growth Factor serum to boost the impact of the needling treatment. This is followed by a calming LED light therapy treatment.

### What does the LED light therapy do?

The final part of the DermaFrac treatment is an optional LED light therapy session. The light therapy promotes collagen stimulation, suppresses inflammation and reduces irritation.

### What can DermaFrac treat?

- Ageing skin
- Fine lines and wrinkles
- Brown spots and pigmentation
- Open pores and congested skin
- Acne and acne scarring

### How will DermaFrac help my skin?

Typically your practitioner will recommend a course of DermaFrac treatments which will promote collagen production and cell renewal giving your skin a healthier, smoother and altogether fresher appearance. It will also target pigmentation and sun damage as well as uneven texture. As a single treatment it provides a fantastic boost in advance of a special occasion and significant results should be seen when a course of 6 treatments are undertaken.

### Down time and after care

There are no side effects and no recovery time is required. Mild redness may occur for a couple of hours post treatment but generally the skin is smooth and glowing immediately after treatment. Post treatment your aesthetic therapist will advise the use of a 50+ sun protection factor such as Epionce Ultra Shield or Daily Shield.
