Reveal the true beauty of your skin

Epionce skin peels will help you achieve a radiant, clear complexion and boost the effects of your skin care.

Frequently Asked Questions

What is the Epionce Peel System?

The Epionce peel system is a professionally applied peel procedure which stimulates cell turnover, skin rejuvenation and accelerates the restorative process – revealing more beautiful, radiant skin with minimal downtime.

What is the difference between Epionce Lite Refresh Peel and Epionce Corrective Peel?

We offer two types of peel – the Epionce Lite Refresh which is the entry point for clients new to skin peels or for those looking for a more frequent treatment that will boost the condition of the skin by smoothing and brightening. This peel provides a positive anti-oxidant effect, contains antiinflammatory properties and promotes collagen production.

The Epionce Corrective Peel is a more advanced treatment and is formulated to improve the appearance and texture of the skin by increasing cell turnover to reduce the appearance of fine lines, wrinkles and sun damage. The treatment can be varied in strength and intensity thereby customised to your individual needs. The corrective peel produces optimal results as a course of six and requires using Epionce products two weeks prior to the treatment taking place.

Am I suitable for this treatment?

The Epionce peel system is suitable for most skin types and conditions regardless of your age. Your Aesthetic Therapist will help you determine which treatments and products suit you best to deliver the healthy, beautiful skin you desire.

What are the benefits of the Epionce Skin Peels?

These peels help improve the appearance of fine lines and wrinkles, brighten and refresh the complexion and target signs of sun damage and age spots. They help to reduce acne and rosacea flare ups. They can be combined with other aesthetic treatments such as microdermabrasion.

Will my skin actually peel?

No, this is not a harsh treatment which strips the skin but a gentle light flaking may occur up to one week post treatment.

What is the recommended regime and aftercare?

We always recommend a course of peels to get optimum results but even a one off treatment will make a significant difference to the complexion for that special occasion. Epionce home care products are advised to continue the positive benefits achieved by your peel. They will deliver a blend of active botanical anti-oxidant ingredients to deeply penetrate the skin and work synergistically with your peel regime.

Mineral make-up can be used post procedure.
