MEDICAL AESTHETICS

The Fotofacial using Palomar Intense Pulsed Light was first introduced into the UK by Dr Hilary Allan and Dr Mervyn Patterson.

The Fotofacial is beneficial in treating the following:

- Sun damage
- Rosacea
- Pigmentation
- Broken veins
- Age/sun spots
- Skin laxity
- Enlarged pore size
- Uneven texture
- Facial redness

So if you feel your skin lacks the glow of youth or is uneven, red and flushed, this versatile treatment could be the answer for you. Contact us today for a consultation.

Enjoy the glow of more youthful and healthy looking skin

Photorejuvenation, also known as the Fotofacial, is recognised as the most effective treatment for the reduction of facial redness, flushing, face veins, pigmentation and fine lines and wrinkles.

Frequently Asked Questions

What is a Fotofacial?

It is an aesthetic treatment that uses gentle pulses of intense, optimised light to treat undesirable pigment and vessels which can occur as a result of ageing, sun damage and lifestyle choices.

Who is suitable for this treatment?

If you suffer from sun damage, sun spots, age spots, pigmentation, broken capillaries or rosacea, you would be an ideal candidate for photorejuvenation.

What areas can be treated?

Photorejuvenation treatments can be used on any part of the skin. They are especially effective for improving the appearance of the face, neck, chest and back of hands.

How does it work?

Photorejuvenation uses an optimised light device to deliver energy into your skin, targeting vascular and pigmented lesions, which slowly disappear as your body's natural healing process progresses.

How long does it take?

The photorejuvenation procedure can be performed in as little as 15 minutes, depending on the size of the treatment area.

How many treatments will I need?

You will see some improvement immediately. A course of 3 to 5 treatments may be needed depending on the severity of your condition to achieve the best results.

Does it hurt?

Most people feel little discomfort during the procedure.

How quickly will I recover?

You can resume regular daily activities right away and start to see some improvement immediately.

What results can I expect?

You can expect to see a decrease in the appearance of skin pigment and vessels for a more even skin tone.
