*Beauty without boundaries*

Before

After

# Imagine never having to wax, pluck or shave ever again...

**Vectus Laser Hair removal provides fast and efficient long term hair reduction in a flash using the latest Skintel™ Technology to ensure your safety.**

## Frequently Asked Questions

### How does it work?

Vectus laser hair removal systems use a wavelength and beam of pure light which is of single colour and form. This concentrated beam can specifically target the hair producing cell and can be tailored to each individual hair and skin type. The hair and its follicle absorb the energy from the laser beam and this then destroys the regrowth capability of the hair producing cell.

### Why choose laser?

The Vectus hair removal system gives you the latest, quickest and most effective hair removal treatment. Skintel™ technology provides us with a computerised reading of the skin allowing us to select the appropriate skin type for an accurate and safe treatment which is individually tailored to the client.

The laser provides rapid hair removal and is particularly suitable for larger areas such as legs, arms, chest and backs.

### What results can I expect?

Depending on the area treated, an average of 6 to 8 sessions over 6 to 12 weekly intervals will typically reduce the hair growth by 75% to 85%.

### How long does it take?

Because a feature of the Vectus is its rapid treatment technology, large areas such as legs, arms and backs can be treated in under 30 minutes with smaller areas being treatable in under 15 minutes making this a truly lunchtime treatment.

### Does it hurt?

Most people feel very little discomfort with laser hair removal.

### Side effects

There is no down-time to this hair removal system. The treated area may be a little pink after treatment but this quickly subsides. You can resume normal activities immediately afterwards.

### Am I suitable for this treatment?

Most people are suitable for laser hair removal but recent exposure to the sun and tanning including fake tans must be avoided 4 weeks prior to the treatment.

### What next?

If you are considering having this treatment our highly trained Aesthetic Therapists will be pleased to offer a consultation to see if your hair and skin types are suitable for laser hair removal.

All clients wishing to have Laser or IPL hair removal treatment will be required to come in for a test patch one week prior to procedure.
